Question 13 (continued)

- (c) A golfer hits a golf ball with initial speed $V \text{ m s}^{-1}$ at an angle θ to the horizontal. The golf ball is hit from one side of a lake and must have a horizontal range of 100 m or more to avoid landing in the lake.

Neglecting the effects of air resistance, the equations describing the motion of the ball are

$$x = Vt \cos \theta$$

$$y = Vt \sin \theta - \frac{1}{2}gt^2,$$

where t is the time in seconds after the ball is hit and g is the acceleration due to gravity in m s^{-2} . Do NOT prove these equations.

- (i) Show that the horizontal range of the golf ball is $\frac{V^2 \sin 2\theta}{g}$ metres. 2
- (ii) Show that if $V^2 < 100g$ then the horizontal range of the ball is less than 100 m. 1

It is now given that $V^2 = 200g$ and that the horizontal range of the ball is 100 m or more.

Question 14 continues on page 14

- (i) By differentiating the product $F(t)e^{0.4t}$ show that 2

$$\frac{d}{dt}(F(t)e^{0.4t}) = 50e^{-0.1t}.$$

- (ii) Hence, or otherwise, show that $F(t) = 500(e^{-0.4t} - e^{-0.5t})$. 2

- (iii) The concentration of the drug increases to a maximum. 2
